**Dear Parents,**

In Language Arts, we've finished working on verbs and have begun learning to write paragraphs as well as working on comparative writing. We sent Flat Stanley off to Canada on March 11, along with a journal of our memories with him. Sadly, he has not arrived yet in Canada. We are worried about him and have written him letters wishing for his safe arrival soon.

In Math we completed our unit on data management and graphing and had a lot of fun questioning our classmates about their preferences. We even used our understanding of

data collection to help us choose what pizza to order for our pizza party. We are now learning about more strategies to make addition and subtraction easier for us. After this, we will be ending our year with a fun hands-on measurement unit.

In Science we wrapped up an incredibly fun unit learning all about matter. Now, having completed all of the Grade one Science curriculum, we have chosen a topic of interest and are studying a unit on space. The kids made excellent mind maps and have surprised me with their vast understanding about our solar system. We are looking forward to doing many space projects in this unit and integrating this fascinating topic into

Language Arts! For International Day our class did an AMAZING job presenting what they learned about the Netherlands. Thank you for your support in sending them to school dressed in Orange! We won first place and were able to have a pizza party as our prize!
